### Tech Stack:

JAVASCRIPT

TYPESCRIPT

PYTHON

C++

REACT

EXPRESSJS

EXPRESS

NODEJS

MONGODB

ANGULAR

REDUX

AXIOS

AXIOS

PASSPORTJS

AWS  
LAMBDA/IOT/  
GREENGRASS

GITLAB CI

VERSION  
CONTROL

DOCKER

RUBY

RAILS

PSQL

MATERIAL-UI

## Profile

MERN full-stack developer, I have also have experience with IOT and AWS deployment. I pride myself on how hard I push myself to learn as much as possible every day. I genuinely love development and the problem-solving satisfaction it brings.

## Projects

### Developer Portfolio

Mongodb | ExpressJS | React | NodeJS

- Designed a web portfolio using figma
- Built, implemented and deployed my web portfolio using MERN stack

### Basic ToDoList App

Mongodb | ExpressJS | React | NodeJS

- Quickly built a ToDo List User Interface using React + Material Ui Framework
- Built a NodeJS backend API with express and deployed to heroku, this is connected to a mongoDB database
- Deployed the frontend with netlify continuous deployment

### SmarthomeDashboard

Mongodb | ExpressJS | React | NodeJS  
C++ | Docker

- Started by creating a "smarthome device", a RGB SaltLamp, coded in C++  
I created a nodeJS API that communicates with the lamp via MQTT
- This is all controlled from the React frontend which uses Material-UI  
In order to decrease latency and increase reliability I dockerized the API and frontend and deployed them to my home server

### IKEA Shift Scheduler

Mongodb | ExpressJS | React | NodeJS

- Built and implemented a shift scheduling tool for IKEA
- Created business logic to assign shifts in the most efficient way, saving manager time
- Parsed a schedule of shifts in an automated way to create a shift schedule

## Experience:

### Nukon Internship

**01/20 - 03/20**

In 1 month I learned and implemented a continuous integration pipeline, following that I learnt the basics of serverless architecture and how to deploy scalable IoT solutions. I also got experience with: Docker, Angular, AWS deployment, Typescript

### CoderAcademy Student

**08/19 - 02/20**

During this course I learnt many web technologies but my tool of choice is typically MERN stack, during the course I completed many hands-on projects and got the chance to ask some great mentors as many questions as I wanted!

## Education:

### CoderAcademy

Diploma of Information Technology

### Windaroo Valley High School

Cert II Business

QCE

## Community

- HealthHack 2019
- VR Hackathon
- ARC Hardware Startup Weekend Hackathon

## IOT Edge Application

Mongodb | ExpressJS | Angular | NodeJS  
AWS Greengrass | AWS Lambda | AWS SAM

- Learned AWS Greengrass and how to deploy IOT applications in a scalable way
- Created an application that would configure itself in an automated way, so that the user did not have to setup anything
- Implemented business logic that would connect to an OPCUA server in an automated way and then forward the requests via MQTT

**Feel free to ask me about  
side-projects I'm working on!**
